Abstract
Rajonivritti as a diseased condition is not described separately in the classical texts of Ayurveda.. According to Acharya Sushruta and various other references too, 50 years is mentioned as the age of Rajonivritti,. Rajonivrutti janya lakshana is a group of symptoms produced by degenerative changes. Menopause is defined retrospectively as the time of the final menstrual period, followed by 12 months of amenorrhea. Currently, the number of menopausal women is about 43 million and projected figures in 2026 have estimated to be 103 million. So, menopausal health demands even higher priority in Indian scenario. In modern science, hormone replacement therapy is one and only alternative for these health hazards, but it has a wider range of secondary health complications. Therefore, many menopausal women use complementary therapies to cope with their symptoms. It has become essential to understand the etiopathogenesis and to study the basic principle of the treatment of Rajonivrutti janya lakshana.

Aim-
Literary Study of Management of Rajonivritti Lakshanas w.r.s. to Postmenopausal Syndrome In Ayurveda.

Objectives –
To review literature compilation related to Rajonivritti Lakshanas,.Postmenopausal Syndrome & basic Ayurvedic principles of Management of Rajonivritti Lakshanas.

Material & Method –
Brihatrayi and Laghutrayi of Ayurveda classics. Modern text related to Postmenopausal Syndrome & other relevant science literature along with Internet material and research papers.

Conclusion-
On the basis of Ayurveda as well as Modern fundamentals after analyzing the above facts, basic Ayurvedic principles of Management of Rajonivritti Lakshanas has been played a valuable role.

Keywords-
Rajonivritti Lakshanas, Postmenopausal Syndrome, Management, Ayurveda

Introduction
Menopause is defined retrospectively as the time of the final menstrual period, followed by 12 months of amenorrhea. Post-menopause describes the period following the final menses.1 Rajonivritti as a diseased condition is not described separately in the classical texts of Ayurveda,. According to Acharya Sushruta and various other references too, 50 years is mentioned as the age of Rajonivritti,. Rajonivrutti janya lakshana is a group of symptoms produced by degenerative changes.
Currently, the number of menopausal women is about 43 million and projected figures in 2026 have estimated to be 103 million. So, menopausal health demands even higher priority in Indian scenario. In modern science, hormone replacement therapy is one and only alternative for these health hazards.

- **Need of the Study:**
  An estimated 80% of females experience physical or psychosocial symptoms while approaching menopause, leading to change in their quality of life (QOL).
  Many symptoms found related to postmenopausal syndrome are hot flushes, irritability, mood swings, insomnia, dry vagina, difficulty concentrating, mental confusion, stress incontinence, urge incontinence, osteoporotic symptoms, depression, headache, vasomotor symptoms, insomnia etc.
  In modern science, hormonal replacement therapy (HRT) is the only alternative for menopausal syndrome, but it has a wider range of secondary health complications like vaginal bleeding, breast cancer, endometrial cancer, gallbladder diseases, etc. Non-hormonal pharmacologic therapies have been shown to be less effective than hormonal therapy and to be associated with their own adverse events that restrict their use for many women. Therefore, many menopausal women use complementary therapies to cope with their symptoms. Therefore, considering it as a challengeable malady, the present study entitled “Management Of Rajonivritti Lakshanas w.s.r to Postmenopausal Syndrome in Ayurveda” has been undertaken to find out effective and safe management of Rajonivritti Lakshanas w. s. r. to Postmenopausal Syndrome.

- **Material & Method**
  Brihatrayi and Laghutrayi of Ayurveda classics. Modern text related to Postmenopausal Syndrome & other relevant science literature along with Internet material and research papers.

- **Ayurvedic Review of Menopausal Syndrome**
  Rajonivritti as a diseased condition is not described separately in the classical texts of Ayurveda, Rajonivritti Kala is mentioned by almost all Acharyas without any controversy. According to Acharya Sushruta and various other references too, 50 years is mentioned as the age of Rajonivritti, when the body is fully in grip of senility. In the Classical Ayurvedic text, the Astanga Hrdayam, it is said: “Just as the lotus closes at the end of the day, so also the yoni after the rutu kala (the period suitable for conception); thereafter she will not be receptive for sukra (semen).” Rajonivritti janya lakshana is a group of symptoms produced by degenerative changes.

- **Nidana of Rajonivritti**
  The specific reasons for Rajonivritti are not described in the Ayurvedic texts. But the most probable reasons for it to occur are:
  - Swabhava
  - Jarapakvasharira due to kala
  - Dhatukshaya
  - Effect of dosha
  - Vayu
  - Abhighata

  Ayurvedic science has divided all diseases into four major types. Agantu, Sharira, Manas and Swabhavika (Sushruta Sutrasthana 1/24) Acharya Sushruta has mentioned a group of naturally occurring diseases under the heading of Swabhavabala Pravritta includes Kshudha (Hunger), Pipasa (Thirst), Nidra (Sleep), Jara (Aging) and Mrityu (Death) (Sushrut Sutrasthana 1/24 & 28/8). Although these diseases are naturally occurring diseases, but sometimes they are being acquired also. So, they are further divided into two types, Kalakrita and Akalakrita (Sushrut Sutrasthana 24/8). In some manner, Rajonivritti too is a naturally occurring condition in everywoman as that of Jaravastha and Swabhavika Vyadhies.

- **Samprapti(Pathogenesis) of Rajonivritti**
  Rajonivritti occurs at...
sandhikala of praudhawastha and jarawastha, where vata starts overpowering pittadosha and leads to kshaya of all dhatus. Gradual decline in all dhatus occurring in jarawastha is a natural process. Vatadosha is the major factor contributing in kshaya of all dhatus. During praudhawastha, pittadoshais also provoked along with vata; hence symptoms of pittavriddhi are also present along with vata.

- Types of Rajonivritti
Rajonivritti also can be divided into two types, Kalaja Rajonivritti and Akalaja Rajonivritti.

1) Kalaja Rajonivritti –
If Rojonivritti occurs at its probable age, it is called as Kalaja Ronivriti. According to Acharya Sushruta (Sushruti Sutrasthana 28/8)

2) Akalaja Rajonivritti –
If Rajonivritti occurs before or after its probable age, it is termed as Akalaja Rajonivritti. Akalaja Rajonivritti takeplace due to absence of the protective measurements of health care.

- Menopausal symptoms in Ayurveda (Rajonivruttainubandhlakshan)17
1) Vatadominant menopausal symp-toms-
dryness in vagina, extremities get cold, difficulty in getting sleep, mild to vari-able hot flushes (Invariable), anxiety, panic, nervousness, mood swings, dryskin, palpitations, bloating and consti-pation.

2) Pittadominant menopausal symp-toms-
Angry, irritable, excess hot flushes, night sweats, extremely heavy periods with burning sensation, skin rashes, as-sociated complaints such as UTI (uri-anry track infection).

3) Kaphadominant menopausal Symptoms-
Weight gain, lethargy, depression, lack of motivation, hormonal changes such as Thyroid malfunction, fibrocystic changes in uterus or in the breast and excessive fluid retention.

- Modern Review of Menopausal Syndrome
Each phase of a women’s life is beautiful and should be considered as gracious. Right from the moment that she entered the world or when she steps in adolescence which makes her capable to be prepared to experience motherhood, or finally the transition to menopause. The word ‘Menopause’ comes from the greek word ‘Menos’ (month) & ‘Pausis’ (cession). Menopause is a natural phenomenon occurs at the age of 45-55 years. Menopause means permanent cessation of menstruation at the end of reproductive life due to loss of ovarian follicular activity.18 The menopause is a gradual and natural transitional phase of adjustment between the active and inactive ovarian function and occupies several years of a women’s life and involves biological and psychological changes adjustments. This period is usually associated with unavoidable manifestation of aging process in women.19 Most women experience near complete loss of production of estrogen by their mid-fifties.20 During reproductive years, women are protected by female hormones, i.e. estrogen and progesterone. With menopause, women enter an estrogen deficient phase in their lives, which accelerates the ageing process resulting into greater vulnerability to psychosomatic problems. Hot flushes, sweating, changes in mood and libido are some of the important outcomes affecting the quality of life (QoL) during climacterium in women. QoL covers physical, functional, emotional, social, and cognitive variables up to 85% of menopausal women.21

- Cause of Menopause-

Menopause is because by the nature declining function of the ovaries, which gradually produces lower and lower levels the hormones oestrogen, progesterone, and testosterone.
Other causes include surgery that removes both ovaries or some type of chemotherapy

- **Menopausal symptoms** -
  - Hot flushes
  - Night sweats
  - Trouble sleeping/Insomnia
  - Joints pain
  - Fatigue
  - Depression
  - Palpitation
  - Vaginal dryness
  - Mood swing
  - Loss of libido
  - Impaired memory
  - Urinary incontinence

- **Diagnosis of Menopause**:
  - Cessation of menstruation for consecutive 12 months
  - Appearance of menopausal symptoms: "hot flush" and "night sweat"
  - Vaginal cytology showing maturational index of at least 10/85/5 (feature of low estrogen)
  - Serum estradiol < 20 pg/ml
  - Serum FSH & LH > 40 mIU/ml (three values at weekly intervals required)

- **Complication of Menopause**:
  - Cardiovascular disease
  - Osteoporosis
  - Urinary incontinence
  - Sexual function
  - Weight gain

- **Ayurvedic principles of Management of Rajonivritti Lakshanas.**
  In Ayurvedic classics, menopause finds its mention by name only as part of normal physiology and natural aging, which can be judiciously implemented to alleviate menopausal as well as associated aging problems. Each phase of our life gives its own opportunity for growth and personal expansion so this transitional stage of a woman’s life should be looked upon as her wiser days with a positive approach. Ayurvedic treatment of Menopause focuses on strengthening and rejuvenating the reproductive system.

1. **Preventive Measures**

   The basic principle of therapeutics in Ayurveda is *Swasthyashya Swasthya Rakshanam* (to maintain the health) and then *Aturasya Vikara Prashamanancha*, (if any symptoms manifest or persist, to treat it accordingly). Preventive measures are significantly preferred. The first and foremost objective of *chikitsa* in Ayurveda is *Dhatusamyata* (homeostasis) and is the most important component of preventive medicine. Observing *Dinacharya* (daily regimen), *Ritucharya* (seasonal regimen), regular removal of aggravated *Dosha* according to *Ritu* (season) by *Panchakarma* are the means to keep *dosha* in harmony.

   *Swasthavritta* (code of conduct for personal, social, and preventive medicine), *Tryopastambha* (diet, sleep, and coitus); *Ahara Vidhi Visheshayatanam* (Rules of proper dietary intake) save from *Akalaj Vradhavastha* (untimely degenerative changes) and other troublesome outcomes related with aging. In short, eradication of causative factor is the treatment. Treatment modalities aim at clearing obstruction in pelvis, treating Agnimandya at Jatharagni and Dhatwagni level.

2. **Nidann-pariwarjan**

   - Avoiding *causes* & *Samprapti vighatana* (breakdown of pathological factors)

   Acharya Charak mentions, the treatment aims are not only radical removal of causative factors of Disease, but also restoration of *Doshas-Dhatu* Equilibrium.

   In Ayurveda, Menopause deals with ‘*Jara Pakva Avastha*’ of body *Jara* and *Rajonivritti* are manifested due to progressive reduction in the functional ability of *Agni*, which results into an inadequate tissue nutrition.

3. **The proven therapies comprehend under mainly Three types**:

   - *Daiva-vyapashraya*, *Yukti-vyapashraya* and *Satvavajaya.*

   *Chikitsa* (therapeutics) in Ayurveda is broadly classified into *Daivavyapashraya*
Chikitsa (Spiritual therapy/ use of divine methods like mantra, offerings to God etc.), Sattvavajaya Chikitsa (restraining mind from unwholesome objects/ psychotherapy) and Yuktiyapashray Chikitsa (rationale therapy). Yukti is a method of analysis that targets multiple variables. Yuktiyapashray Chikitsa means complex multiprincipal clinical interventions. It consists of Nidan Parivarjan (avoidance of causative factors), Samshodhan Chikitsa (cleansing of body by Panchakarma/purifying measures) and Samshaman Chikitsa (palliative therapies). Samshaman Chikitsa is indicated for the patient not fit for Samshodhan and is also used after Samshodhan Chikitsa. It includes Ahara (wholesome food), Vihar (wholesome activities) and Aushadha (medicament).

As there is natural vitiation of vata dosha with advancing age it is important to avoid the provocative causes of Vata dosha as a preventive measure. Tolerance of adhariniya vega (unsuppressible urges) and intolerance of dharaniya vega (suppressible urges), excessive and single use of Amla, Lavana, Katu, Tikta, and Kashaya rasa in diet, diva swap (day sleeping) and ratri jagaran (night wakefulness), daily coitus without Vaajikarana (aphrodisiacs), overindulgence in alcohol drinking, excessive physical work, unrestrained mental and emotional fluctuations, etc. should be avoided.

4. Management of Dosha
Menopause starts in late stage of Madhyamavastha and then continued in Vruddhavastha. In Vruddhavastha Dosha aggravated is Vata and Kapha is decreasing. Ageing and Dhatukshaya is main cause of Vata aggravation. So management of Vata is of very much important. At the beginning of menopause there is also associated Pitta Dosha. So symptoms like hot flushes, sleeplessness etc can be controlled by managing Pitta Dosha. Daily consumption of ghee, milk, which increase kapha can delay the onset of menopause.

‘Ghritaksheeradi nityasu muditasu kaphatmasu|Aartavam tishthati chiram viparitasvato- anyatha||’ (Ashtang Samgraha, Sharir 1/69) Ghrita is Vata-pitta shamaaka(pacifying), Balya (strengthening),Agnivardhaka (promoting digestion), Madhura, Saumya(agreeable),Sheeta-Virya (cooling in effect), Shulahara (pain relieving), Jvarahara (antipyretic), Vrishya(aphrodisiac) and Vayasthapaka(age stabilizer). Thus, it not only pacifies Vata and Pitta but also improves the general condition of the body and acts as a rejuvenator of the body. Ghrita is Yogavahi (special affinity to carry and to potentiate the actions of the main drug to which it is mixed) and thus helps in increasing bio-availability of other drugs without losing its own property.

5. Management of Dhatukhsaya
Through Rasayan Chikitsa(rejuvenation therapy)
It is a unique concept of Ayurveda. It provides a comprehensive physiologic and metabolic restoration for aging. Rasayana chikitsa is mainly used for maintaining the health of healthy individuals although it can be used for diseased also. The word Rasa in rasayan has multiple references; it refers to the Rasa Dhatu in the context of Rasadi Sapta Dhatu(body tissues) and to the pharmacodynamic properties of a drug in the context of Rasa Guna etc. Ayana means circulation, the measures by which one is capable of getting the nourishing Rasa. Acting through a complex and comprehensive mechanism of rasa-samvahan(circulation of nutrient juices), dhatu, agni and srotas, it nourishes bodily tissues through micro-nutrition, thus helping in regeneration, revival and revitalization of Dhatu. they act by enriching the nutritional value of the circulating plasma. Acting at the level of Agni i.e. at the level of digestion and metabolism acting at the level of Srotamsi-the microcirculatory channels.
carrying nutrition to the tissues) These Rasayana cleans and activate the micro-circulatory channels i.e. Sroto Shuddhi leading to improved tissue health and their quality.

**Actions of Rasayana Drug**
- Prevents senile degeneration
- Stimulate metabolism
- Promote body resistance and immunity
- Improves memory and intelligence
- Increase vitality
- Freedom from disease
- Restore health and increase long life

6. **Maintenance of Mansik(mental) health**
The aggravated Vata with Rasa Dhatukshaya affects the mental health of menopausal female. Hence it is very important for a physician to appreciate and understand the psychological state of the female.

7. **Role of Agni**
Agni is important integral part of the body. Agni is causative factor for life span, colour and complexion, strength and enthusiasm. Derangement in Agni causes disturbances in all above factors. Postmenopausal females are more prone for Agnidushhti due to Dhatukshay, ageing and aggravating Vata. For good digestion Agni must be maintained.

8. **Role of Abhyanga**
Abhyanga is said to be Jarahar, Shramhar, Vatahar, Drishtiprasadkar, Pushtrakar, Ayushyakar, Swapnkar, Kleshsahhtwa, Kapha Vata Nirodhan. It has considered as important part of the external Snehana. By the Abhyanga with oil, human body become strong and smooth- skinned. It becomes unsusceptible to the disease of Vata and resistant to the exhaustion and exertion. If the body of an individual is oleated properly through Abhyanga then he lives for a long time without any decay of disease. It helps to prevent and arrest the ageing process by rejuvenations.

9. **Role of Shirodhara**
In this procedure Medicated oil milk or butter milk are poured in continuous straight over head. It is mainly useful in premature greying of hairs, fatigue, sleeplessness, stress and psychological disorders. Research conducted on this has proved its utility in management of Manasika Bhavas.

10. **Role of Basti**
Vatadosha is the major factor contributing in kshaya of all dhatus. Gradual decline in all dhatus occurring in menopausal age. Vata is responsible for controlling all the central nervous functions in the body. It also controls neuro-muscular activities and the mind. Basti (medicated enema) is one among the most important Panchakarma therapies for maintence of Vata, which is also considered as “Chikitsardha” (half of entire treatments). It is possessed with multidimensional action. Matra Basti is useful in menopausal female as less quantity of Sneha is used and can be given at all time without any complications. Thus Abhyanga followed by light Swedana helps to pacify Vata and improves circulation. Shirodhara particularly is very effective in hot flashes and psychological disorders like mood swings, anxiety, and depression etc. Basti therapy, Yoni Pichu, Yoni Dhoopana and Yoni Prakshalana (vaginal douching) are beneficial in vaginal atrophy, vaginal dryness and dyspareunia etc

11. **Role of medicinal plants**
**Vayasthapak Aushadha-(Age stabilizer drugs)**
According to Ayurvedic classification, drugs of this group may possesses age sustaining and health promotive properties. They are Amrita/ Guduchi(Tinospora cordifolia), Abhaya/ Haritiki (Terminalia chebula), Dhatri/ Amalki(Emblica officinale), Yukta(Pluchea lanceolata), Shweta(Clitoria ternatea), Jeewanti(Leptadenia reticulate), Atiras (Asparagus racemosus),
Mandookparni (Centella asiatica), Sthira (Desmodium giganticum) and Punarnava (Boerhaavia diffusa).

**Jeevaneeya Aushadha**
Drugs of this group may promote longevity and optimize all the vital constituents and functions in the body. Collectively the first eight of this group are also called as Astavarga. As the original herbs are rare to find, the substitute herbs are used now days. Balya Mahakashaya— (improving strength), they are Aindri (Citrullus colocynthis Schrad.) Rishabh (or Rishabhaka) (Manilkara hexandra), Atiras (Asparagus racemosus), Risshyaprokta (Terannus labials), Payasya (Impomoea paniculata), Ashwayandha (Withania somnifera), Sthira (Desmodium gangeticum), Katukarohini (Picrorhiza kurroa), Bala (Sida cordifolia) and Atibala (Abutilon indicum).

12. **Supplementations of Phytoestrogens**
Postmenopausal women are at a risk of developing diseases like osteoporosis, cardiovascular diseases and cancer. Phytoestrogens are safe, cheap and effective alternative. When used in proper way these are beneficial in breast CA, Endometrial CA and also in the management of menopause. Shatavari, Shatapushpa, Guduchi etc are rich source of phytoestrogens. These are also useful in reducing the menopausal sign and symptoms like hot flush, vaginitis, anxiety and osteoporosis.

13. **Yoga and meditation**
Yoga is useful for controlling mental problems mainly to stress and strain. Astang Yoga includes Yama, Niyam, Asan, Pranayam, Pratyahar, Dharana, Dhyan and Samadhi. Out of these Asana, Pranayam and Dhyan can be effectively used in menopausal female. Yoga is among the most commonly used complementary therapies for menopausal symptoms. Pranayama was found to be effective in relieving postmenopausal symptoms in female patients in previous clinical trials.

**Discussion:**
The objective of the present study entitled, “Management Of Rajonivritti Lakshanas w.s.r to Postmenopausal Syndrome in Ayurveda” were searched and analyzed. On the basis of Ayurveda as well as Modern fundamentals after analyzing the above facts, Both the term Rajonivritti and Menopause literally convey same meaning. In modern science Hormone Replacement Therapy (HRT) is one and only alternative for this health hazard by which one can get spectacular achievement in combating the disease, but it has a wider range of secondary health complications. Thus it can be concluded that Ayurvedic management of Menopausal Syndrome is very much effective with no untoward side effects, it is cost effective and increase the longevity.

**Result:**
Menopause is not a disease but transitory phase, It is the phase where Dhatukshaya starts and Vata Dosha turn out to be Predominant Dosha. Management of vitiated Vata and Dhatukshaya through Rasayan chikitsa, Abhangya, Basti, Shirodhara supplement of Phytoestogens, Bruhaniya, Balya and Vayasthapan drugs along with maintenance of mental health with the help of Yoga and meditation definitely helps menopausal females to change annoying menopause to healthy and happy menopause.
