**Abstract:**
As Ayurveda gives much importance in maintaining health and prevention of diseases along with treatments of diseases. These Dinacharyas can be adopted in our day to day lives to protect the eye from diseases and improve the vision, by implementing improvised tailor-made techniques for day to day activities of present era. The Acharyas have armed us with proper knowledge to prevent and treat life style disorders related to eye diseases through explanation of Pathya Apathya and Dinacharyas which are practices of Kriyakalpas. Most of these practices are not being followed these days which leads to many Nethra Rogas. This can be corrected by re-implementing improvised versions of such practices in our daily life.

The word\textit{Chakshu} means which illuminates the objects and enlightens the mind about its details, which is situated in two eyeballs. When we talk about Pathya and Apathya, the importance of the word Chakshushya is came upon. The Pathyas have been explained by different authors in the heading of Chakshushya Vargas and the Apathyas have been explained as Achakshushya.

**Keyword:** Nethra Swasthya, Pathya, Kriyakalpa, Eye health, Dinacharya, Chakshushya.

**Introduction:**
Swastha as most important concepts of Ayurveda and Shalakya Netra explains the maintainance of health of the Indriyas. Chakshure indriya is most important of all Gnyandriyas. Eye health well explained in Sushruta Samhitha and
Ashtanga Hrudaya [2] and also following dinacharya. Chakshushya means promotion of eye health. The Nethra is the Sthana of Alochaka Pitta[4] but it is unique because it is situated in the Uttamanga which is the Sthana of Kapha. [5] As we are facing many lifestyle disorders which can well prevented by following Dinacharya.

Maintainance of Eye health with Dinacharya

All the Acharyas have mentioned the mandatory practice of Dinacharya for health maintainance. Among these, Special mention of certain daily regimen is important. These are practices which can be done easily on a daily basis.

Abhyanga(Oil massage)

Sarva Daihika Abhyanga -Whole body oil massage: The word Drushy Prasadanis mentioned in Ashtanga Hrudaya stating that daily oil massage to the body before taking bath is essential in maintaining and improving the vision.

Padabhyanga- The body massage with special importance to the head ears and feet have been given much importance by the mention of the two Drushti Gata Nadis; Gandhari and Hastijihwabythe Acharyas.[6]

The Abhyanga can be followed on a daily basis with special importance to foot massage before taking bath.

Anjana -Collyrium (application of kohl)

There are basically 2 types of Anjanas mentioned in the classics. Them being Sauviranjana and Rasanjana.

Sauviranjana is a special collyrium, which is to be applied on a daily basis which makes the eyelids look unctuous and beautiful. It gives clarity of vision and the three colours of the eye are maintained properly, i.e., the health of the eye ball is maintained properly. As these actions indicate that this particular collyrium might increase the Kapha Dosha, eye being a Pitta Sthana, the Acharyas have mentioned about another collyrium.

Rasanjana -This is to be applied on a weekly basis to reduce the Kaphaiincreased in the eye due to daily usage of Sauviranjana.

In our day to day life, we can practice the Anjana Karma which is a part of the Kriyakalpa by application of natural Kajal made from the soot of the lamp on a daily basis and application of Daruharidra Anjana on a weekly basis.

Snana-Bathing, special mention has been given to the usage of hot and cold water for bathing. The Acharyas have specifically mentioned that the usage of hot water is for the trunk and not for the head. Hot water over the head can prove detrimental to the eye health. This is clinically seen as most of the people in cold territories have a practice of pouring hot water for head wash. These particular people also end with poor eye sight. On a daily basis this is a simple practice which can be adhered to.
Eye wash - The Acharyas have given particular reference to eye wash during the daily regimen of brushing the teeth. Also the practice of Kavala Gandusha with cold water has been mentioned for better maintenance of health.

All these practices can be easily adhered to, for the prevention of eye diseases and the maintenance of eye health.

Pathyas Chakshushya Vargas:

Acharya Sushrutha have given specific mention of milk and other diary products, stating that Cow’s milk is the healthiest for the eye. The ghee and butter made out of cow’s milk is imperative in eye health maintainance. The milk is to be taken at night before bed time for best results.

Vanga Sena Samhitha mentions Triphala, Madhu, Ghritha, Yava and Shatavari along with the practice of Pada Abhyaanga for eye health maintainance.[7]

Even particular mineral drugs have been mentioned as Chakshushya, if taken after Shodhana along with a combination of other herbal drugs in the form of Rasayana Swarna(gold), Abhraka(Mica), Tamra(Copper), Loha(Iron)[16] Acharya Yogaratnakara has given a detailed list of Chakshushya Varga as follows;

Food prepared with Mudga, Yava, Rakta Sali, soup of Kulattha, Peya and Vilepi prepared with Purana Ghritha, vegetables like Surana, Patola, Karkotaka, Karavella, Punarnava, Markava, Kakamachi, Lodhra, Kumari, Draksha, Vara, Madhu, Chandana and Karpura.[8]

He has exclusively mentioned five vegetables - Shaka Panchaka as Chakshushya

1. Jeevanti
2. Vastuka
3. Matsyakshi
4. Meghanada
5. Punarnava

Among other food the following are the most beneficial for the eye Rakta Sali, Godhuma, Mudga, Saindhava, Go- ghrutha, Go-Ksheera, Sita and Kshudra mentioned as Pathya for the eyes.[9]

Researches

Modern research has proved the effectiveness of Triphala, Madhu and Ghritha having significant role in the promotion of eye health.

Pyruvate and Vit-C found in Amalaki helps in inhibiting lens sorbitol levels thus reducing the formation of cataract.[12]

Haritākī Anti Cancerous, Anti diabetic, Antimutagenic in nature Vibhitaki fruit extract showed antioxidative properties.[13]

Clinical trial in senile cataract with instillation of honey in varying doses proved beneficial.[14]

Aims and Objects:

Aim – To discuss the concepts of pathya-Apathya and Dinacharya for netra swasthya.

Objectives-

To understand the concepts of Pathya-Apathya and Dinacharya for netra swasthya.
To understand the concept of netra swasthya procedures in treatment of eye diseases.

To elaborate the ancient science and it’s effects which replicate also in modern science.

Discussion:

The above mentioned practices and foods can be incorporated in our modern life to avoid lifestyle diseases as well as improve eye health. The practice of Padabhyanga has clinically proven to be effective in promoting eye health. The practice of Anjana Karma on a daily basis has been proven to show improvement in vision. The practice of Kriyakalpas have shown statistically and clinically significant results in promotion of eye health and as treatment for various eyediseases.

Conclusion:

The Pathyas and Apathyas mentioned are significantly accurate and can be practiced along with the daily regimen for promotion of eye health. Only slight changes have to be adopted to adapt these practices in our day to day activities. The prevention is greater than cure so all the practices need to be applied in today’s world as the prevalence of life style based eye diseases is on the rise.

Acknowledgement:

I would like to thanks my teacher Dr S P Golecha, Professor & HOD, Shalakya Tantra Dept. Ayurved College, Rahuri and I also thanks to Dr. Arun Magadum who helped me at every step.
